

Cloud-Based Business Phone Service

Discover how your business can benefit from a cloud-based phone system

What are Cloud-based Phone Systems?

The days of using hardware-based phone systems are almost behind us. The likes of on-premise PBXs are no longer practical in the new, technologically advanced business environment. Their high acquisition and maintenance costs paved the way for a new, efficient telephone system that could serve a business well in the increasingly competitive environment.

Cloud-based phone systems are telephones systems that use the internet for their entire functionality. As such, they effectively match the functionality of on-premise PBXs but without the huge installation, operational and maintenance costs. Furthermore, as the internet is not bound by geographic locations, cloud-based phones systems can cater to a very flexible, mobile and hence more efficient business environment. Cloud-based phone systems can thus be used to build a robust communication system, connecting remote locations and employees. People in your business can use cloud-based phone systems to continue to work regardless of their location.

What is Callture Cloud-based Phone Systems?

Callture Cloud-based Phone Systems are aimed at small businesses, helping them get started with an affordable and effective phone system. Callture offers a comprehensive phone system package that is easy to install, removes the need for expensive on-premise phones. As such your business can simultaneously enjoy enterprise-level functionality and a price point that suits your modest budget. Get started with just a few clicks.

What makes Callture Cloud-based Phone Systems so great?

Every Callture Cloud-based Phone Systems package offers you a plethora of benefits such as:

- Simple setup, get the service going within minutes
- We don't have any contract, it is month to month.
- We guarantee lowest prices. If you find anything better we will beat it by 10%!
- There are no set up fees.
- You can transfer your toll free or local number free of charge to us.
- Fully customize our phone system to fit your business needs.
- Your calls can be transferred to our VoIP phones, your mobile phone or to any number. Hence you can have some employees using our VOIP phones wherever they are and if they want to use their mobile phone for convenience they can do that as well.
- No need for technicians or IT professionals. You can do it yourself easily. However, if you need any help, we are just a phone call away.
- Extremely scalable system; expand from 5 phones to 100 phones within minutes.

- Free 24/7 customer service

The Ultimate Business Phone System

Cloud based Business VoIP Phone

Make and receive calls from your VoIP phone through us. Calltute will also show your company's phone number when you call out. Calltute gets you phones from various providers.

Most phones have features such as:

- 3-way calling
- Call transfer
- Do not disturb
- Speakerphone
- Call mute on the handset.

Unlimited Calling

Make unlimited calls to any phone number in the continental US and Canada for a low flat monthly price. You can also receive unlimited local calls.

Toll Free Number

A toll free number offers a big company image to clients and other callers who want to contact you free of charge regardless of their location. We offer a variety of toll free number types, from 800 and 866 extensions.

Vanity Numbers

A vanity number is a phone number that spells a name such as 1800FLOWER or 1855COMPANY. You can get vanity numbers for your business at Calltute.

Professional Image

Using Calltute Cloud-based Phones Systems gives an impressive professional image to your company.

Greets your callers with a customized greeting, give them options such as **press 1 for sales or 2 for customer service...** and route them to you by forwarding the call to one phone or all of your phones. The system even informs you through caller ID that it is a business call so you can answer it professionally.

If you don't answer the call, it greets the caller with a professional voicemail and emails you the voicemails so you can call them back. It also comes with a separate fax line as well as call conferencing.

Calltute delivers the complete package to give a professional image that your business needs and deserves.

Never Miss a Call, Forward Anywhere

Forward calls to your Calltute business phone system to any phone including your mobile, landline and/ or VoIP. You can forward the call to all of your phone numbers at the same time or one after the other.

Calls can be programmed to ring on your mobile phone for two rings and then to ring your home for 3

rings and so on. It can also be programmed to ring all the numbers at the same time. You can answer the call at any of your phone.

If you miss a call, it is sent to a professional voicemail system and the voicemails are emailed to you. This ensures you won't miss a call again.

Customized Main Greeting

"Welcome to ABC Company. Please press 1 for sales. 2 for Support..."

To add a big company feel you can use a custom main greeting to inform callers of their options, such as accessing information or reaching a specific department.

Internet Fax

Get a separate number for fax. Your clients can send fax to this number the same way they do for regular fax. However, when a fax is received by our system, it is going to be converted to a .pdf file and emailed to you. You can send faxes from our website to any number from anywhere. You don't need to pay extra for a separate fax line, fax machine and toners. If you want to use a fax machine, we will provide an adapter to send the faxes through us.

Conference Calling

Set up a conference call with up to 10 people at any time. You can use this to train your clients or conduct a sales meeting.

Local Number

A local number provides a local presence for your target city. Many clients use local numbers in geographical targeted advertising. We provide numbers for all major cities. These numbers can be to company's main greeting or directly to the VOIP phone.

Extensions

You can setup a specific extension for each department or each employee. Each extension can have specific message & voicemail delivery settings and is forwarded to a VOIP phone.

Memo on Call

This patented Memo on Call feature allows you to record notes after you finish a call. When the same caller calls back, this voice memo will automatically play before you answer the call. You can access these notes at any time after the call as well.

For example, if you are on the road and are not able to take notes, you can record a memo after the call and simply retrieve it when you get to your office, or whenever you need the information.

Music-On-Hold

Allow callers to listen to music while they wait on hold. Most big companies have this feature and make a good impression on the caller.

Unlimited Call Handling

Do you receive multiple incoming calls throughout the day? This feature ensures your callers never hear a busy signal. You can leave them on hold, send them to voicemail, or answer the call.

Live Call Transfer

Transfer a live call to another extension in the phone system, or another phone number anywhere in the world.

Virtual Calling Card

Your phone number can be used as a virtual calling card account number if you ever need one. All you have to do is call one of our many access numbers, enter your toll free number and pin, and you will be able to make long distance calls.

Call Blast

This feature allows you to call up to 5 different phone numbers simultaneously.

Call Recording

Need to remember something from a phone conversation? Our call recording feature comes in very handy when you need to remember key points from a phone call.

Click To Call

Our 'Call Me Button' service allows people visiting your website to submit their phone number on your website and instantly be contacted by a company representative. The System instantly connects both you and the website user.

Dial-By-Name Directory

Let your caller access your company directory and find a person they are looking for by dialing the first few letters of an employee name.

Call Queue

You have the option of setting up a queue with automated call routing. If you receive multiple calls, all of them will be put on a queue and routed to your agents at the same time or one after the other.

Call Blocking

You can choose to block a specific phone number or area code from calling your toll free/local number.

Transfer Existing Toll-FREE Number

We accept all transfer numbers free of charge.

Additional Toll-FREE Numbers

Available upon request.

Additional Local Numbers

Available upon request.

Other Features

-
- Answering rules
- Call blocking
- Return calls with *69
- Call log
- Call forwarding

- Conference call
- Caller ID
- Call recording

Enterprise-Level VoIP Phones

Calltuture's Cloud Based Internet Phone Systems use Aastra's and Cisco's full-featured IP phones.

Phone Name	Pricing	Summary
Aastra-6730i	\$93.69	XML Support and Enhanced Call Management are only a few of the features that the 6730i offers. It also provides a 10/100Mbps Ethernet port, a 3 line LCD display, and 8 programmable keys with LEDs.
